

UNIVERSITIES USE QUESTEK ADVANCED TECHNOLOGIES TO UPGRADE COMMUNICATIONS

Questek Advanced Technologies (QAT), a supplier of turnkey audio visual designs and installations, has been awarded a multi-million rand tender by the University of Limpopo to upgrade their video-conferencing communications systems.

Previously known as the University of the North, the University has merged with the Medical University of Southern Africa (MEDUNSA) to form the University of Limpopo. The objective of the upgrade is to reduce the cost and travel risk of senate committee members travelling between the Tshwane and Polokwane campuses for meetings.

QAT will install their state-of-the-art video conferencing system, which includes an automated camera tracking solution. The camera system allows for delegates to push a button on a personal console as they are about to speak, which activates the camera to focus-in on their pre-determined position.

“Video-conferencing changes the way companies and institutions conduct business. The system installed for the University of Limpopo will assist in maximising resources, optimising productivity and reducing costs thereby improving efficiency,” says Sobi Mokholo,

QAT General Manager.

About Questek Advanced Technologies (QAT)

QAT specialises in the integration, design and installation of innovative state-of-the-art audio visual solutions. Utilising convergence of voice, data and visual technologies, Questek creates the platform to manage and visually present knowledge in increasingly innovative ways.
