## Barco expands ClickShare portfolio to bring the power of wireless collaboration to any meeting room

**Barco, a leader in professional meeting room visualization and collaboration systems, introduces the new CSM Base Unit for its ClickShare collaboration and presentation system. ClickShare now comes in two flavors – the new CSM Base Unit and the original full-featured CSC Base Unit – so that any meeting room can benefit from the ClickShare experience.**

Since its introduction, ClickShare has changed the meeting culture of a large number of professionals around the world. By enabling all participants to share their content on the central meeting room screen at the click of a button, ClickShare ensures that everyone is involved more intensely in the decision-making process. Coupling extreme simplicity with an unmatched user experience, everybody who has used ClickShare is immediately hooked.

### **ClickShare for the standard meeting room**

The new CSM Base Unit offers the core ClickShare experience at a price of 1750 EUR. This means that any meeting room, regardless of its capacity, can be fitted with a ClickShare system. The new CSM Base Unit displays images up to Full HD resolution – via its HDMI or VGA output – and is fully compatible with both the ClickShare Button and the free apps for iOS and Android. Only one user can share on-screen at a time, but eight Buttons can be connected wirelessly to the base unit, ready to share. A set consists of the CSM Base Unit and two ClickShare Buttons.

### **What if you need more?**

For users who need higher resolution or a double screen setup, or want multiple users on the central screen at the same time, Barco recommends the current CSC Base Unit. Designed for high-profile meeting rooms, boardrooms and conference rooms, this system offers a full set of features to deliver a more complete ClickShare collaboration experience. Among other features, the CSC can drive two separate screens simultaneously, as well as support special output resolution, including panoramic composition (2560 x 1080). Up to four people can share content on-screen at the same time, while 64 Buttons can be ready to share.

### **A ClickShare for every meeting room**

“For the introduction of the CSM Base Unit we’ve made extensive use of the capabilities of AWIND, the Taiwanese technology-leader that Barco acquired earlier this year,” says Guy Coen, General Manager Collaboration. “This new base unit combines the many years of experience of both design teams to offer a new ClickShare experience. As it is within most meeting room budgets, a whole new range of professionals will discover ClickShare, making the system an essential part of any meeting room’s equipment.”

The ClickShare range is available from Barco’s South African representative – Questek Advanced Technologies.
